WEBINAR

Tuesday 15th September, 10am - 11.15am

Latest developments in high accuracy, micro manufacturing

Engineered devices are getting smaller and lighter all the time and this means that manufacturers increasingly need to develop expertise in producing miniature high-quality parts, quickly.

Emerging miniaturisation technologies are driving developments in micro-scale processes, machines and metrology to meet needs related to part size, feature definition, accuracy, precision and materials development.

Join us online to hear from a range of manufacturers and technology providers including AWE, Bumotec, Rainford Precision, ESPI and AMRC.
